

## Property & Rating

# Mobile Infringements

Increase operational efficiency and maximise resources through an easy to use, out-of-the-box and cost effective solution.

- Designed specifically to use lightweight devices
- Utilises standard system parameters and controls to establish infringement types and mandatory information
- Directly linked to the Infringement Management module
- Removes the need to manage batch upload files between the device and corporate business solution
- Provides clear visibility of infringement types and stages

## Key features and benefits

Property & Rating Mobile Infringements enable operational staff to use leading edge lightweight devices in the field to generate infringement tickets. With real-time integration to the Infringement Management module, it negates the requirements to manage device synchronisation or data file imports.

### Utilises existing configuration

The Mobile Infringement module utilises the already existing system configuration to determine the form requirements, mandatory information and drop down lists. This approach enables an immediate start-up of the module without any device based system configuration demands.

### Immediate print capabilities

The solution supports immediate printing of infringement notices, including mobile Bluetooth connected devices.

### Real-time online integration

Operating within a connected mode provides real-time integration with the Infringement Management module. Council customers can present the printed ticket immediately at the Council front counter and pay their infringement penalty.

### Devices supported

The solution supports iOS devices.
